RFP Copilot Prototype Architecture

Planned integ

PDF ingestion · LLM generation · Retrieval · Telemetry · Evaluation harness

Prototype demonstration: parsing and proposal generation are currently stubbed. Symbolic checks validate declared fields, not legal compliance.

What the Validator Checks

Parsed Data → Validation Check → Field Present

The sample follows the successful path when a declared field is present.

The check confirms a field's presence; it does not establish legal compliance.

A stronger implementation would use typed fields, evidence mappings, and separate predicates.

Prototype demonstration: parsing and proposal generation are currently stubbed.
